

# Gruppo Micro e Nano Sistemi

## Competenze ed esperienze:

- Sistema di deposizione di strati sottili per spraying di soluzioni colloidal

- Produzione di sistemi nanostrutturati con ablazione laser

- Sistema di deposizione mediante elettrospinning

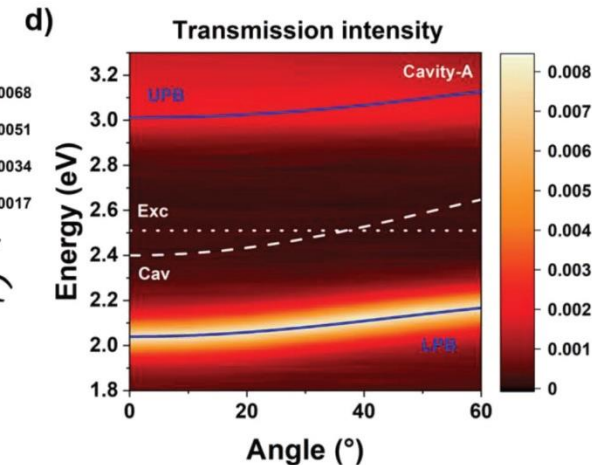

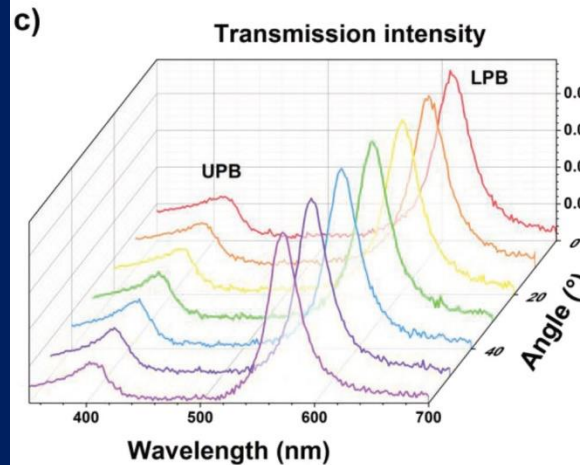

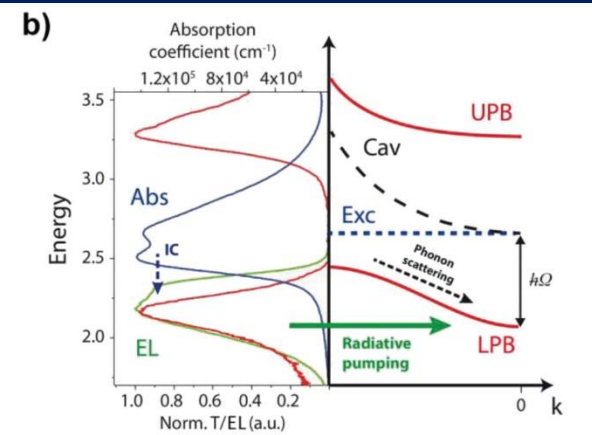

# Gruppo Micro e Nano Sistemi

Competenze ed esperienze:

- Microcavità ottiche basate sull'uso di materiali

- Weak, strong and ultrastrong Coupling Regime

# Gruppo Micro e Nano Sistemi

## Competenze ed esperienze:

- Micromachining con laser impulsato al picosecondo

easy integration of ps-lasers!

Galvo scanners with 20m/s top speed

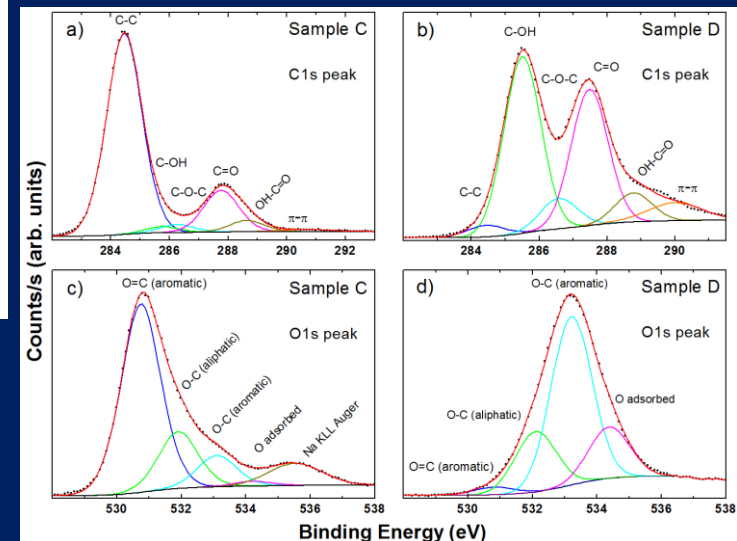

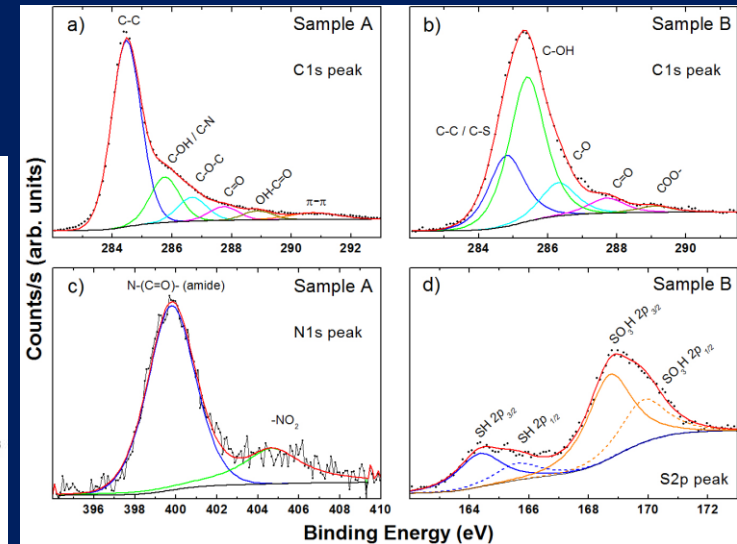

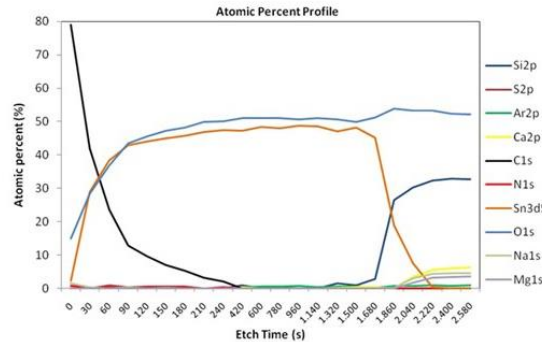

**Competenze ed esperienze: Analisi chimico-fisica di superfici e materiali**

## Spettroscopia fotoelettronica a raggi X (XPS)

**Diagnostica chimico-fisica su scala micro e nanometrica di superfici solidi, polveri e strutture a film sottili multistrato.**

Schematic of Sputter Depth Profiling

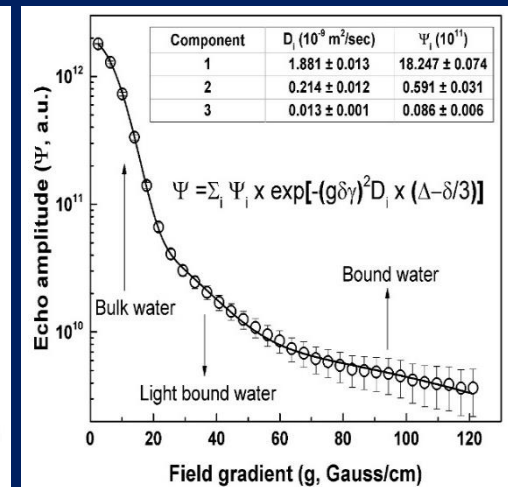

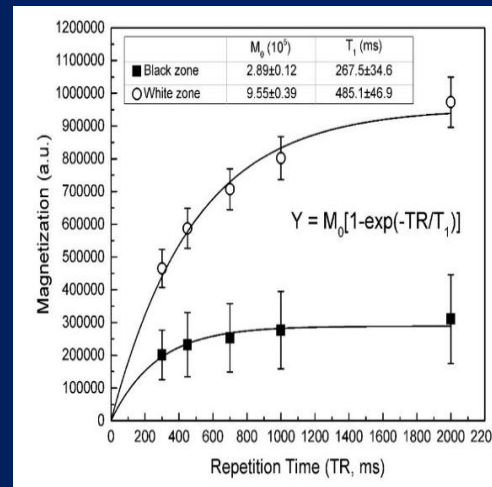

Si analizzano la mappatura composizionale superficiale su scala micrometrica e gli effetti dovuti al sovrapporsi di strati di materiali diversi, attraverso l'analisi del profilo di profondità

**Competenze ed esperienze:** studio delle proprietà:  
 a) chimico-fisiche di sistemi complessi (polimeri, macromolecole di interesse biologico etc);  
 b) dinamiche e termodinamiche di soluzioni acquose.

## Risonanza Magnetica Nucleare (NMR)

c) Analisi dei processi di degradazione di materiali a base legnosa (ex reperti storici)

**Competenze ed esperienze:** studio delle caratteristiche chimico-fisiche di alimenti mediante calorimetria ed NMR

## DSC

## LV

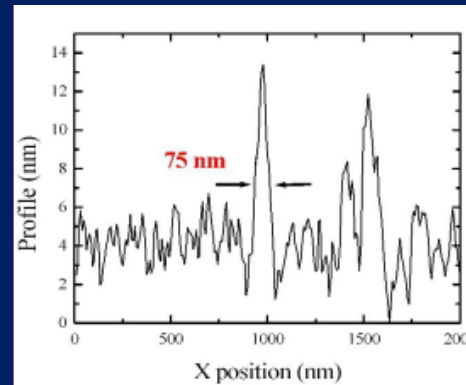

## PCA

# Competenze ed esperienze: Analisi chimico-fisica e morfologica di superfici e materiali

scanning near-field images Optical vortex

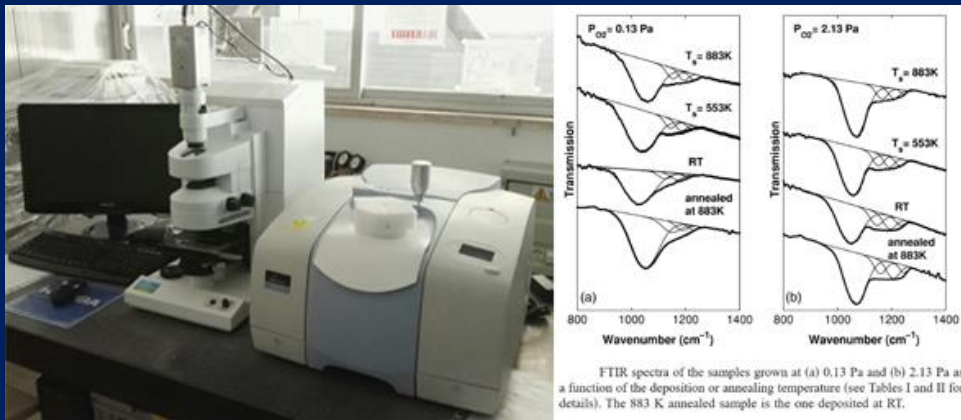

# Gruppo Micro e Nano Sistemi

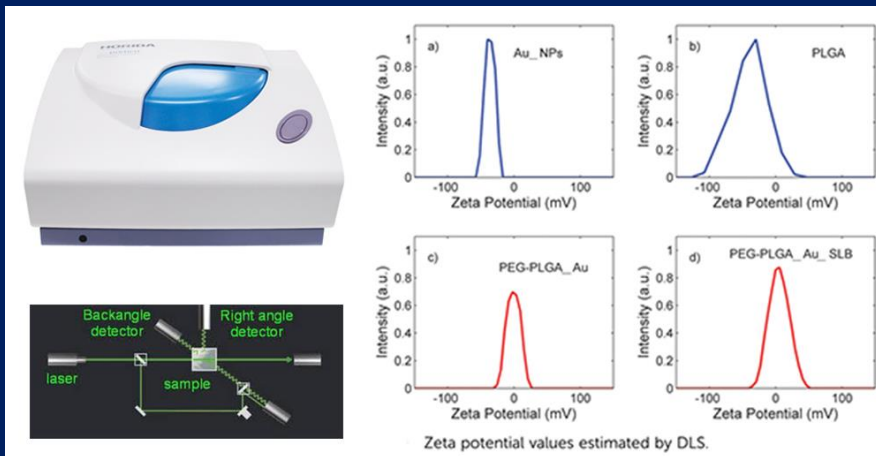

**Competenze ed esperienze:** Analisi chimico-fisica e morfologica di materiali

## Tecniche di spettroscopia ottica convenzionale

### FTIR

### Assorbimento ottico

### Dynamic Light Scattering (DLS)

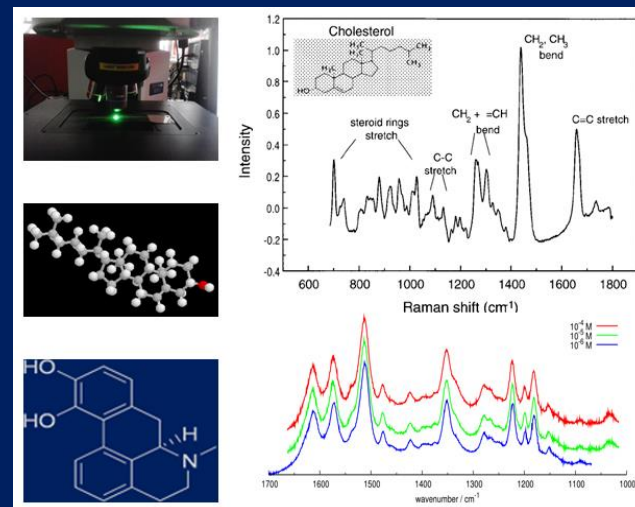

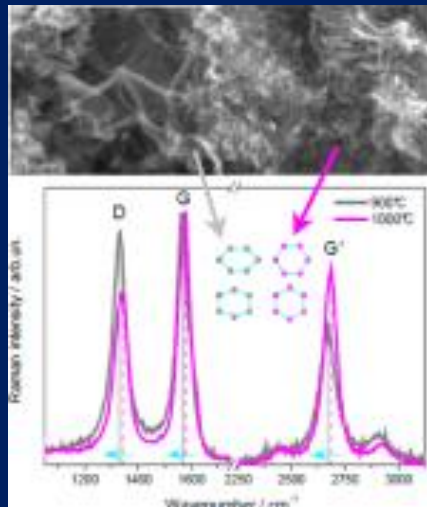

# Competenze ed esperienze: Analisi chimico-fisica e morfologica di materiali

## Microscopia a scansione elettronica (FE-SEM/STEM)

## Spettroscopia micro-Raman (anche in configurazione SERS)

## Spettroscopia ottica non-lineare (tecnica Z-scan)

Analisi della risposta ottica nonlineare di sistemi colloidal di NPs mediante lo studio del coefficiente di assorbimento e dell'indice di rifrazione in funzione del repetition rate dell'impulso laser, della concentrazione e natura del solvente.

# Competenze ed esperienze:

## Supporto all'industria elettronica

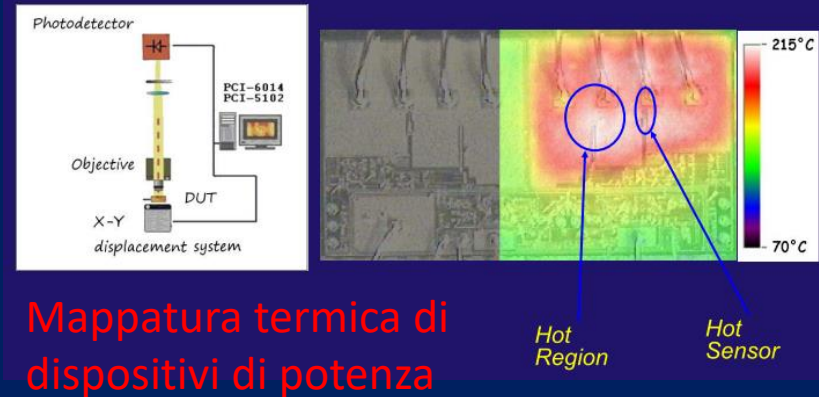

Planar

Trench

## Affidabilità di dispositivi elettronici

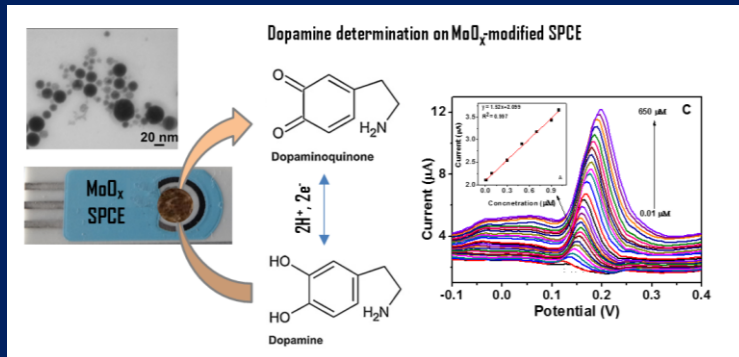

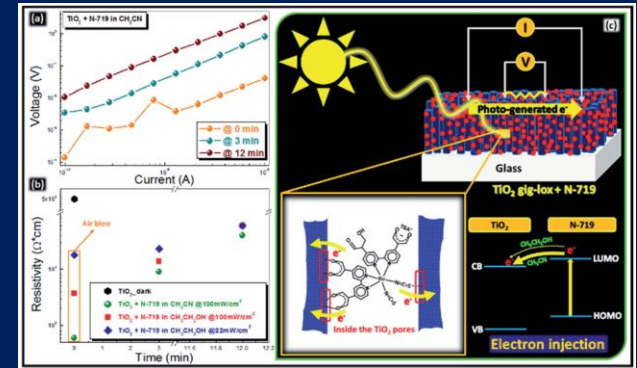

In collaborazione con lo stabilimento St Microelectronics di Catania.

Mappatura termica di dispositivi di potenza

## Applicazioni:

- Realizzazione di sistemi per la conversione dell'energia;
- Design e realizzazione di dispositivi per la fotonica e l'optoelettronica;
- Sviluppo e caratterizzazione chimico-fisica di materiali e dispositivi in ambito biomedicale, energetico e sensoristico etc;

**Per chi fosse interessato ....**

**Vi aspettiamo per una chiacchierata più approfondita!!!**

**Prof. Salvatore Patanè**

(patanes@unime.it)

Possibili argomenti di Tesi:

- Problematiche di affidabilità termica di sistemi e dispositivi per l'elettronica di potenza.
- Studio dello stress meccanico su dispositivi elettronici per mezzo della spettroscopia Raman e TERS
- Realizzazione di sistemi e dispositivi per la Fotonica

Possibili argomenti di Tesi:

- Caratteristiche di universalità nei processi dinamici
- Interazione idrofilica ed idrofobica nella determinazione
- delle proprietà di sistemi biologici

**Prof. Enza Fazio**

**Dr. Carmelo Corsaro**

(enfazio@unime.it; ccorsaro@unime.it)

**Prof. Enza Fazio**

**Prof.ssa A.M. Mezzasalma**

**Prof. Neri**

(enfazio@unime.it;

mezzasalma@unime.it; fneri@unime.it);

Possibili argomenti di Tesi:

- Sintesi e caratterizzazione di sistemi micro-nanostrutturati per la sensoristica, la conversione energetica
- Sintesi e caratterizzazione di sistemi polimerici additati con NPs metalliche per applicazioni biomedicali
